## **Chordate enrolls first patients in a randomized, placebo-controlled, double-blind, multicenter study to evaluate the efficacy of intranasal kinetic oscillation stimulation in the treatment of chronic non-allergic rhinitis**

### **Data Anticipated Q4 2019**

---

Kista, Sweden, May 08, 2018 — Chordate Medical Holding AB's (publ) ("Chordate"), a specialty medtech company that focuses on developing and commercializing neuromodulating treatment systems for treating non-allergic rhinitis and migraine, today announced that the first patients were enrolled in Chordate's clinical study of its Kinetic Oscillation Stimulation System S101 (KOS-treatment), an investigative product, in patients with diagnosed chronic non-allergic rhinitis.

"To now get started with the first patients at the University Hospitals in Helsinki and Kuopio, Finland, is very important in our long-term securing of scientific evidence. We know from previous studies, and our own and others' clinical experiences in practice, that we make significant difference for this very large patient group. We are now building further on this with the aim to produce a clear scientific basis for our continued business journey", says Anders Weilandt, CEO of Chordate.

The randomized, placebo-controlled, double-blind, multicenter study is being conducted at fourteen ENT university clinics in Finland, UK, The Netherlands, Italy and the Czech Republic. Coordinating investigator is Professor Claire Hopkins at Guys Hospital, London and study advisor is Professor Mats Holmström at the Karolinska Institute, Stockholm. The study intends to enroll up to 300 subjects and is designed to evaluate the efficacy and safety of the KOS-treatment. The primary endpoint is to detect weekly median change in a set of evaluation criteria from baseline, with a series of two consecutive treatments, until the third month follow-up visit. The total follow-up period of each patient is twelve months. Patients in the KOS arm will receive active treatment from the S101, while patients receiving placebo treatment will be given a validated sham treatment from the same equipment.
