First installation up and running in Oman

Meltron has now successfully installed 28 units so called pylon lights in the Halban Horse Stadium in Oman. The lights are installed in 8 masts of 12m height. The Meltron pylon lights have sophisticated cooling and superior optical features with specific lens technology. The lights can also be made significantly lighter than conventional lights.

- The customer is very happy with the quality of lighting, says Ville Sistonen, CEO of Meltron. Horse riding is a very popular sport in Oman and there is a large number of similar facilities in the country. We are also working on several larger projects for football stadiums, which require a significant number of strong lights and superior optics to meet television requirements. The potential for Meltron is enormous.

About Meltron

Meltron AB designs, manufactures and sells LED lighting based on interdisciplinary application of electronics, optics, thermodynamics, materials and nanostructures. Prioritized niches represent applications demanding long life cycles, robust and durable light sources and, from an industrial perspective, short payback periods. Prioritized niche markets are animal stables, industrial lighting and street lighting.

LED lighting is one of world's fastest growing industries. For this sector the annual growth is 47 % and the total market for 2020 is expected at 100 billion USD, according to Edison Research.

*The Meltron share is traded on NGM Nordic MTF (NGM Nordic SMR from 3 Feb) under short name **MLTR**.*
