First pilot order from gas company in Finland

Meltron has received a pilot order for the EX gas explosion proof lights, a first important order from Gasum Oy, a Finnish state owned gas company with sales of 1.1 bill euro. Gasum distributes biogas and LNG and runs a network of gas filling stations in Finland, Sweden and Norway, primarily for heavy traffic and transportation.

- This is a first small order from Gasum Oy for a filling station in Finland, to be installed in two months time. We know from experience that the evaluation of a pilot is important and very often only a first step, says Ville Sistonen, and we are confident that Gasum will value the high quality. The EX lights are top of the line with an extensive certification for 299 gases and are currently being evaluated by large companies in the oil and gas and the pharmaceutical industries.

About Meltron

Meltron AB designs, manufactures and sells LED lighting based on interdisciplinary application of electronics, optics, thermodynamics, materials and nanostructures. Prioritized niches represent applications demanding long life cycles, robust and durable light sources and, from an industrial perspective, short payback periods. Prioritized niche markets are animal stables, industrial lighting and street lighting.

LED lighting is one of world's fastest growing industries. For this sector the annual growth is 47 % and the total market for 2020 is expected at 100 billion USD, according to Edison Research.

*The Meltron share is traded on NGM Nordic SME under short name **MLTR**.*
