Raytelligence – signs agreement with Careteq, Australia

Raytelligence signs agreement with Careteq, <https://www.careteq.com.au/> to market and sell EaZense exclusively for Australia and New Zealand.

Careteq also has the non-exclusive right to market and sell EaZense on the US market.

”This agreement means presence in more interesting markets and EaZense is included as part of Careteq's offering in a major procurement in Australia” säger Klas Arvidson, CEO Raytelligence

“We are extremely positive after being awarded the exclusive distribution rights for the Raytelligence EaZense fall detection technology in Australian and New Zealand. This strategic partnership will bring cutting edge technology to our clients, providing improved options to how we are able to care for the aged and vulnerable members of our community. The introduction of the Raytelligence EaZense fall detection technology will change the way we are currently able to identify and raise alerts for falls with a completely non-wearable, passive solution. This innovative addition will complement Sofihub’s leading approach to monitoring the most vulnerable members of our community in aged care facilities” says Peter Scala, CEO Careteq.
