

ÅAC Microtec

Sector: Technology

Improving order backlog

The Q1-numbers were a bit lower than we expected. Total revenues of SEK 18 million is unchanged Y/Y and much lower Q/Q. But as we learned from last year, fluctuations are significant between the quarters, depending on timing of deliveries. Cost items are basically as expected, but earnings obviously under our estimates.

Encouraging order backlog

We are still optimistic about the near term outlook thanks to some improvement in business momentum and a solid order backlog. ÅAC Microtec's annual report includes some interesting information in this respect. Note 27 states that expected revenues from customer projects, as of year-end 2018, is SEK 76 m in years 2019-21. SEK 65 m of this is due in 2019, which is a substantial amount and higher than we anticipated. Also some encouraging new orders have been received lately. Most notably the deal with ORBCOMM, ÅACs first Space-as-a-Service contract with SEK 54 m in expected revenues over five years.

New management

The process of recruiting and installing a new CEO was really swift. Luis Gomes took office in early May. His career resume and our first impression of him is overall positive. ÅAC just announced that the head of their US subsidiary, Brent Abbot, has resigned. Hopefully his successor will be recruited as quickly (as Luis Gomes). The company is now in the process of hiring personnel, primarily in Clyde Space in Glasgow it seems. Probably a good sign of increased production and good traction in their business activity.

Estimates and valuation virtually unchanged

We only make minor adjustments in our financial forecasts, in spite of the Q1-numbers. There is good reason to believe that the remainder of the year will be on a higher level, given the order backlog mentioned above. And the longer term outlook is still favorable. The rights issue was already included in our valuation. Our Base case fair value remains around SEK 6.1 per share, including subscription rights (SEK 5.2 excluding). The valuation range for our bear and bull case: SEK 3.4-8.2.

ANALYSTS

Henrik Alveskog
henrik.alveskog@redeye.se

Dennis Berggren
dennis.berggren@redeye.se

Improving order backlog

The first quarter was basically on par with Q1-18. As we pointed out before, Q4-18 was exceptionally strong and included some larger shipping. Cash flow in this quarter was actually a little better than earnings, thanks to reduced working capital. The various cost items are very much in line with our estimates. IFRS 16 (operational leasing) gives a SEK 1 m boost to EBITDA, while its impact on EBIT is marginal.

ÅAC Microtec: Expected vs. Actual

(SEKm)	Q1' 18	Q1' 19 Actual	Q1' 19E	Diff

EBIT margin	neg	neg	neg	

Source: ÅAC Microtec, Redeye Research

We can now back-track the sales split between the different product categories over the last year. Subsystems are making up for the bulk of revenues, in both Clyde and ÅAC. As you can see platforms had higher sales in the first half of 2018 than in the last three quarters. We believe this will be reversed in the coming years.

Revenues from licenses (royalties) have been lumpy so far, and probably will be for some time. Hopefully this will be a bigger and more steady source of income in the future, since it's a margin booster to the group. We have seen that ÅAC is making progress in Japan and with York Space Systems. If York can realize its expansion plans, it would be of great benefit to ÅAC.

Sales per segment

Financial forecasts & Valuation

Only minor changes in our forecasts

We only make minor adjustments in our financial forecasts in spite of lower than expected Q1-numbers. The order backlog that we referred to earlier on page 1 (stated in ÅACs annual report, only available in Swedish) gives us confidence that revenues will be substantially higher on a 12m basis. Also both ÅAC and Clyde Space have a long list of clients that we expect to place new orders but obviously the timing is hard to predict.

Rights issue should be fully subscribed

The rights issue will be carried out in the next few weeks. Subscription period is May 20 - June 3 and the price for new shares is SEK 3. The 50% discount to current share price suggests that it will be fully subscribed, or at least close to it. We are very curious to see the forthcoming changes among major shareholders. A new (undisclosed) investor has committed to SEK 22.6 m (7.5 m shares). Hopefully this is someone with deep pockets, who is in it for the marathon.

Still robust growth expected in coming years

We expect sales to grow some 20% in 2019 and then picking up over the next few years, see table below. The new concept of Space-as-a-Service could certainly add new and large contracts, as it appeals to any client who prefer to stay focused on its own core business.

The global NanoSat market (ÅACs core market) is expected to grow vigorously in the coming years, some 40% annually 2019-21. We believe ÅAC will grow even somewhat faster since they are targeting high volumes and are committed to scale up. Our forecasts assume around 50% annual sales growth in 2020-21. For the period 2022-29 we assume 20% CAGR.

Gross margins around 50% and EBIT margins 15-20%

Judging from recent interim reports, costs are well under control. Our assumptions are unchanged regarding break-even and future profitability. There are certainly a few unknown variables here. The full year report states that a new generation of sub systems and modular satellite platforms will be developed. This may obviously come with higher costs, but we still have no further insights into these projects.

We expect to see margins improving to around 20% in a few years' time mainly driven by volumes and economies of scale. For the long term we are a bit more cautious assuming 15% EBIT-margin, corresponding to ~17% EBITDA-margin. Both ÅAC and Clyde have stated that they are aiming for gross margins of around 50 percent. With economies of scale, 15-20 percent EBIT-margins should then be within reach.

Valuation

Fair value:
~SEK 5.2/6.1 per
share

Our valuation is based on the financial forecasts on the previous page and assumptions for long term growth and profitability shown below. Our DCF model arrives at a fair value around **SEK 500 million or 5.2 SEK per share after the rights issue**. This corresponds to **SEK 6.1 including the rights** to participate in the issue.

Assumptions for long term growth and profitability during 2022-29:

- 20 percent annual growth. Sales reaching just under SEK 1 billion in year 2029.
- 15 percent average EBIT-margin. Amortization of intangible assets from the Clyde acquisition is not accounted for, since it has no cash-flow impact.
- Corporate tax rate of 23%.

Sensitivity analysis-Sales Growth & EBIT-margins

The value of the company is primarily depending on its long term prospects for sales growth and profitability. In a dynamic industry like New Space, these parameters are very difficult to predict. The sensitivity analysis below illustrates the impact on fair value with respect to variations in CAGR and EBIT-margins for the period 2022-29, all else being equal. The coloured area marks what we consider likely assumptions and the bold number is our base case scenario.

Numbers in the table are **post rights issue** (which is valid after May 13).

DCF value per share, SEK					
Sales CAGR: 2022-29					
EBIT-margin	10%	15%	20%	25%	30%
10%	2.6	3.0	3.5	4.2	5.1
12%	3.0	3.5	4.2	5.1	6.2
15%	3.5	4.2	5.2	6.5	8.0
18%	4.1	5.0	6.2	7.5	9.9
20%	4.5	5.5	6.8	8.8	10.9

Source: Redeye Rating

Scenarios

Our main scenario, under the Base Case heading below, is the starting point for our valuation and provides a fair value of about **SEK 5.2 per share (post rights issue)**. We have also outlined two other possible outcomes. These scenarios are both entirely possible, albeit clearly positive or negative.

Bull

ÅAC-Clyde appears to be aiming much higher than our base case. Also they intend to make another acquisition in order to accelerate their growth. This may certainly happen but M&A is something that we can only pencil into our Bull case scenario. We include one rather big acquisition that will add to sales and improve market position. Hence 25% CAGR 2022-29 (instead of 20%). This acquisition is financed by a rights issue of 30 million shares. Fair value in this scenario would be a bit over **SEK 8 per share**.

Bear

In this scenario we assume a much lower growth rate in 2020-21. Only 20% annually (compared to 50% in our base case). This could be the case if for example, some of the competitors were to pursue the CubeSat market aggressively or if ÅAC would run into difficulties regarding vital matters like management or quality issues. In this scenario our fair value would be much lower, approximately **SEK 3.4 per share**.

Bull Case				
SEKm	Year 2022	Assumptions years 2022-29:		DCF-value

Investment Case

- New Space is creating vast opportunities and a dynamic business environment. The market for smaller satellites is booming.
- ÅAC-Clyde is in pole position to take a big chunk out of this juicy cake.
- Current valuation has to some extent already discounted a strong operating and financial performance.

The concept of "New Space" has attracted a lot of attention in the last few years. And for good reasons. Old space was totally dominated by governments and a few multinational companies. The projects were in the hundred million dollar range and the commercial opportunities rather few. The New Space era is quite the opposite. Technological advances have lowered the barriers of entry and created a multitude of innovative companies providing various new services to people around the world.

New Space is creating vast opportunities

Demand for services provided by satellites is constantly growing, e.g: telecommunication, navigation and positioning, tracking vehicles, surveillance for environmental, military or public safety reasons etc. The scope and variety of services that could be provided with information from different satellites is endless. A large number of new companies with innovative ideas and services have emerged in the last few years. But we have probably only just seen the very tip of the iceberg yet.

The market for small satellites is booming

Smaller satellites can replace most of the large and expensive satellites that were launched previously. Many of the components are today standardized off the shelf products and much smaller than before. Hence in most cases a 10 kg satellite today can perform the same tasks as a 20 year old 500 kg satellite. Today the cost of building and launching is only a fraction of what it used to be. Operators who previously sent up one big satellite every few years can launch dozens of small satellites, getting better coverage, lower risk and at a lower cost. The market for small satellites (up to ~50 kg) is expected to grow rapidly in the coming decade. Market predictions indicate an annual growth rate in the region of 25-30 percent over the next decade.

In the Old Space era operators were stuck with their satellites for 15-20 years with very limited possibility for upgrades or maintenance. This is obviously not ideal since advancements in space technology is rapid and we don't even really know what kind of services will be requested 5-10 years from now. The modern Nano/CubeSats typically have a five year life warranty. With big constellations of small cheap and up to date satellites the operator can cut lead times and better control the risks.

ÅAC is in pole position

After the merger with Clyde Space every prerequisite to gain a significant share of the growing Smallsat market is in place:

1. Quality products and long list of references. Both ÅAC and Clyde have products with several years of flawless flight heritage. Clyde Space has delivered over 2000 subsystems and claims over 500 years of aggregated flight heritage. The combined list of quality clients and projects between ÅAC and Clyde is second to none in the Smallsat industry including: NASA, ESA, Airbus, US Air Force, Raytheon, NEC/Toshiba, UK Space Agency, SNSA (Rymdstyrelsen) and many more.
2. Growing customer base placing repeat orders. Clyde Space is primarily focused on CubeSats and have participated in 30-40% of all CubeSat missions to date. Around 70% of their business is repeat orders and some of their clients are planning to launch major constellations of satellites over the next few years. E.g. Kepler Communication, NSLComm, SRT Marine, Outernet, York Space Systems.
3. Scalable low cost production. The company's vision is to produce large quantities of reliable CubeSats at affordable prices. Hence their products are designed to allow for low-cost mass-production. Currently there is a

shortage of manufacturing capacity to meet the anticipated pick-up in demand. Being able to offer reliable products with short lead times would certainly give a competitive edge.

4. Strong management. In the Nano/CubeSat segment many of the manufacturers are new small companies spun out of universities. Compared to ÅAC they do not appear to have the management, nor the ambition, to take on an industrial approach to grow their business. After the last years' recruitments, including the merger with Clyde Space, the company has a strong management team capable of taking on a leading role in their industry. Being a listed company is also an advantage when expanding the business, particularly in case of an acquisition.

Counter thesis/Bear points:

- Some of ÅAC's new clients are small enterprises that rely on venture funding. They will need further financing in order to maintain their expansion and deploy larger constellations.
- Launching capacity bottleneck not resolved. Initiatives by launch providers such as Rocket Labs, Virgin Galactic and Indian ISRO are expected to solve the shortage of launching capacity that has been a constraint lately. However, lash backs are possible and a risk factor for the entire industry.
- Last mover disadvantage in M&A. ÅAC's ambition is to make at least one additional acquisition. Primarily to gain a better foothold in the US market. If competitors are moving faster, ÅAC's relative market position may weaken. This is not one of our major concerns, since the US market is quite fragmented. There are probably several companies that would make a good fit. But until the company has announced an acquisition, this will be an unknown parameter.

Key Catalysts:

- More business with credible and potentially big operators. Our forecasts are based on a growing number of clients. However, if the company is really successful they may beat our expectations and forecasts.
- Money pouring into space. New Space is attracting a lot of new investments and many new ventures still need funding, e.g. to launch their constellations of satellites. More money to the space industry may also benefit ÅAC if they need to finance another acquisition through a rights issue.
- Reversed vertical integration. Operators like Planet, Spire and OneWeb starting to source from outside. And preferably from Clyde Space.
- Another successful acquisition. ÅAC is looking for: presence in the US, complimentary technology and production capacity. If they can find all three in one single candidate, at a reasonable price, it would be a home-run.

Summary Redeye Rating

The rating consists of five valuation keys, each constituting an overall assessment of several factors that are rated on a scale of 0 to 2 points. The maximum score for a valuation key is 10 points.

Rating changes in the report: No changes

Management: 6.0

Since CEO Luis Gomes is new on the job it's difficult to evaluate management properly. Several other executives have decades of experience from the international space industry. ÅAC's history as a listed company is very short and we still cannot fully evaluate parameters like execution and communication. We do think that the corporate culture (of both ÅAC and Clyde) is very result oriented, lean and cost conscious.

Ownership: 6.0

The two principal owners, Craig Clarke and Fouriertransform, represent the entrepreneur and the institution. The chairman of the board also has a significant stake and so do two other board members. The new CEO still doesn't own any shares (as of May 11 2019) for obvious reasons, but we certainly hope that he will in the future. We would also like to see a new major shareholder with resources to back the company, should they need additional funding in the future.

Profit Outlook: 7.5

The number of customers is growing and most of the business is repeat orders. The market for small satellites is expected to boom in the coming decade. Sales could very well grow by 50% per annum in the next few years. The company offers reliable, high quality products at a low cost thanks to standardization. This should give them a competitive edge for many years to come.

Profitability: 0.0

ÅAC has only posted red numbers so far, hence zero points. Clyde Space did show a small profit in 2015-16. But proforma for the group, numbers are still in the reds, both in terms of profit and cash flow.

Financial Strength: 3.0

The rights issue that we anticipated is now a fact. We believe the additional funds will be sufficient to take ÅAC to positive cash flow. Further on the positive side, the customer base is quite diversified, no single client is making up for more than 20 percent of total revenues. Most of the business is repeat orders and the number of customers is gradually growing.

Redeye Rating and Background Definitions

The aim of a Redeye Rating is to help investors identify high-quality companies with attractive valuation.

Company Qualities

The aim of Company Qualities is to provide a well-structured and clear profile of a company's qualities (or operating risk) – its chances of surviving and its potential for achieving long-term stable profit growth.

We categorize a company's qualities on a ten-point scale based on five valuation keys; 1 – Management, 2 – Ownership, 3 – Profit Outlook, 4 – Profitability and 5 – Financial Strength.

Each valuation key is assessed based a number of quantitative and qualitative key factors that are weighted differently according to how important they are deemed to be. Each key factor is allocated a number of points based on its rating. The assessment of each valuation key is based on the total number of points for these individual factors. The rating scale ranges from 0 to +10 points.

The overall rating for each valuation key is indicated by the size of the bar shown in the chart. The relative size of the bars therefore reflects the rating distribution between the different valuation keys.

Management

Our Management rating represents an assessment of the ability of the board of directors and management to manage the company in the best interests of the shareholders. A good board and management can make a mediocre business concept profitable, while a poor board and management can even lead a strong company into crisis. The factors used to assess a company's management are: 1 – Execution, 2 – Capital allocation, 3 – Communication, 4 – Experience, 5 – Leadership and 6 – Integrity.

Ownership

Our Ownership rating represents an assessment of the ownership exercised for longer-term value creation. Owner commitment and expertise are key to a company's stability and the board's ability to take action. Companies with a dispersed ownership structure without a clear controlling shareholder have historically performed worse than the market index over time. The factors used to assess Ownership are: 1 – Ownership structure, 2 – Owner commitment, 3 – Institutional ownership, 4 – Abuse of power, 5 – Reputation, and 6 – Financial sustainability.

Profit Outlook

Our Profit Outlook rating represents an assessment of a company's potential to achieve long-term stable profit growth. Over the long-term, the share price roughly mirrors the company's earnings trend. A company that does not grow may be a good short-term investment, but is usually unwise in the long term. The factors used to assess Profit Outlook are: 1 – Business model, 2 – Sale potential, 3 – Market growth, 4 – Market position, and 5 – Competitiveness.

Profitability

Our Profitability rating represents an assessment of how effective a company has historically utilised its capital to generate profit. Companies cannot survive if they are not profitable. The assessment of how profitable a company has been is based on a number of key ratios and criteria over a period of up to the past five years: 1 – Return on total assets (ROA), 2 – Return on equity (ROE), 3 – Net profit margin, 4 – Free cash flow, and 5 – Operating profit margin or EBIT.

Financial Strength

Our Financial Strength rating represents an assessment of a company's ability to pay in the short and long term. The core of a company's financial strength is its balance sheet and cash flow. Even the greatest potential is of no benefit unless the balance sheet can cope with funding growth. The assessment of a company's financial strength is based on a number of key ratios and criteria: 1 – Times-interest-coverage ratio, 2 – Debt-to-equity ratio, 3 – Quick ratio, 4 – Current ratio, 5 – Sales turnover, 6 – Capital needs, 7 – Cyclicity, and 8 – Forthcoming binary events.

Disclaimer

Important information

Redeye AB ("Redeye" or "the Company") is a specialist financial advisory boutique that focuses on small and mid-cap growth companies in the Nordic region. We focus on the technology and life science sectors. We provide services within Corporate Broking, Corporate Finance, equity research and investor relations. Our strengths are our award-winning research department, experienced advisers, a unique investor network, and the powerful distribution channel redeye.se. Redeye was founded in 1999 and since 2007 has been subject to the supervision of the Swedish Financial Supervisory Authority.

Redeye is licensed to; receive and transmit orders in financial instruments, provide investment advice to clients regarding financial instruments, prepare and disseminate financial analyses/recommendations for trading in financial instruments, execute orders in financial instruments on behalf of clients, place financial instruments without position taking, provide corporate advice and services within mergers and acquisition, provide services in conjunction with the provision of guarantees regarding financial instruments and to operate as a Certified Advisory business (ancillary authorization).

Limitation of liability

This document was prepared for information purposes for general distribution and is not intended to be advisory. The information contained in this analysis is based on sources deemed reliable by Redeye. However, Redeye cannot guarantee the accuracy of the information. The forward-looking information in the analysis is based on subjective assessments about the future, which constitutes a factor of uncertainty. Redeye cannot guarantee that forecasts and forward-looking statements will materialize. Investors shall conduct all investment decisions independently. This analysis is intended to be one of a number of tools that can be used in making an investment decision. All investors are therefore encouraged to supplement this information with additional relevant data and to consult a financial advisor prior to an investment decision. Accordingly, Redeye accepts no liability for any loss or damage resulting from the use of this analysis.

Potential conflict of interest

Redeye's research department is regulated by operational and administrative rules established to avoid conflicts of interest and to ensure the objectivity and independence of its analysts. The following applies:

- For companies that are the subject of Redeye's research analysis, the applicable rules include those established by the Swedish Financial Supervisory Authority pertaining to investment recommendations and the handling of conflicts of interest. Furthermore, Redeye employees are not allowed to trade in financial instruments of the company in question, effective from 30 days before its covered company comes with financial reports, such as quarterly reports, year-end reports, or the like, to the date Redeye publishes its analysis plus two trading days after this date.
- An analyst may not engage in corporate finance transactions without the express approval of management, and may not receive any remuneration directly linked to such transactions.
- Redeye may carry out an analysis upon commission or in exchange for payment from the company that is the subject of the analysis, or from an underwriting institution in conjunction with a merger and acquisition (M&A) deal, new share issue or a public listing. Readers of these reports should assume that Redeye may have received or will receive remuneration from the company/companies cited in the report for the performance of financial advisory services. Such remuneration is of a predetermined amount and is not dependent on the content of the analysis.

Redeye's research coverage

Redeye's research analyses consist of case-based analyses, which imply that the frequency of the analytical reports may vary over time. Unless otherwise expressly stated in the report, the analysis is updated when considered necessary by the research department, for example in the event of significant changes in market conditions or events related to the issuer/the financial instrument.

Recommendation structure

Redeye does not issue any investment recommendations for fundamental analysis. However, Redeye has developed a proprietary analysis and rating model, Redeye Rating, in which each company is analyzed and evaluated. This analysis aims to provide an independent assessment of the company in question, its opportunities, risks, etc. The purpose is to provide an objective and professional set of data for owners and investors to use in their decision-making.

Redeye Rating (2019-05-12)

Rating	Management	Ownership	Profit outlook	Profitability	Financial Strength
7,5p - 10,0p	51	49	19	12	22
3,5p - 7,0p	93	88	125	42	57
0,0p - 3,0p	15	22	15	105	80
Company N	159	159	159	159	159
