Acconeer welcomes the adoption of new rules for the 60 GHz band in the US

Last week the Federal Communications Commission (FCC) adopted new, more flexible rules for the 60 GHz spectrum band to support state-of-the-art radar technology. For Acconeer this means that once the new rules are effective, our customers can more easily sell their products on the US market.

CEO Lars Lindell comments: "This expected decision is a very important step for us, as it enables more use cases on the US market. We estimate the rules will become official during this summer."

About Acconeer AB

With ground-breaking technology, Acconeer has developed a radar sensor that opens a new world of interaction. Acconeer Micro Radar Sensor, with low power consumption, high precision, small size and high robustness, is a 60GHz robust and cost-effective sensor for detection, distance measurement, motion detection and camera-supported applications with low power consumption. Acconeer combines the advantage of low power consumption with highly accurate pulsed radar systems of coherent radar, all integrated into a component with a surface area of only 28 mm². The radar sensor can be included in a range of mobile consumer products, from smartphones to wearables, but also in areas such as robots, drones, the Internet of Things, healthcare, automotive, industrial robots and security and monitoring systems. Acconeer is a semiconductor company and, as a business model, sells hardware to manufacturers of consumer electronics products. Acconeer is listed on Nasdaq First North Growth Market with the ticker code ACCON, Redeye is the company's Certified Advisor (CA). For more information: www.acconeer.com.
